1 Introduction to Bankline import

1.1 What is Bankline import?

A Bankline import is when you import a set of payments in a CSV file into Bankline. This guide gives you the full spec for importing payments in a CSV format. It contains all the payment fields that can be included on all types of payments. There's also alternative support you can find on the import payments screen in Bankline and help and support areas for Bankline.

Bankline allows your business to manage everyday banking online, including domestic and international payments. Bankline import enables you to import your payment instructions from a file, rather than manually keying them. This can save you time and effort by allowing you to upload payment files straight from your accounting software.

Bankline supports the import of:

- Faster Payments (both one off and from an existing Bankline payment template).
- CHAPS payments (both one off and from an existing Bankline payment template).
- International payments (both one off and from an existing Bankline payment template).
- Sterling and currency transfers (both one off and from an existing Bankline payment template).
- Templates for all the above payment types.
- Bulk payments from an existing Bankline bulk list (Faster Payments).
- Faster Payment bulk lists.
- Sterling bulk transfers from an existing Bankline bulk list only.
- Sterling transfer bulk lists.
- Ad hoc bulk payments (Faster Payments).

This user guide explains how to structure an import record for all of the supported payment types, as well as some pointers to help you get the most out of Bankline import.

1.2 How do I structure a Bankline import file?

The payments in your import file must be in a Comma Separated Value (CSV) file format. The file can be saved as either a .csv or .txt file. For template imports (just payees not payments) it must be a .txt file.

Here's the file lengths that are supported in Bankline, and the header fields you'll need.

- 79 Commas (H001-H003 T001-T077)
- 84 Commas (H001-H003 T001-T082)
- 142 Commas (H001-H003 T001-T140)
- 176 Commas (H001-H003 T001-T174)
- 180 Commas (H001-H003 T001-T178)

Please note, you don't need a comma before the first field or after the final field to define the start or end of each record in the file.

Each record type has its own requirements on how it should be structured, which you can see in section 3 'Import data table'.

1.3 Extended data

This version of our import guide includes additional fields T083 – T178 that we have called ‘extended data’. This reflects industry and regulatory changes that are introducing the ability to include more information when making a payment. The use of extended data does not yet apply to all payment types, and its use is only mandatory in some cases. For example, since May 2025 certain property related CHAPS payments need a purpose code. Sections 2 and 3 have more information on where and how extended data can be used. You’ll also find some payment examples which include extended data in section 4.

1.4 Can I import more than one payment in a single file?

Multiple payments can be imported in a single import file, but there are some restrictions on the possible combinations:

- Templates can’t be mixed in a file with anything other than templates.
- Payments from a template must reference an existing Bankline template.
- Bulk lists can’t be mixed in a file with anything other than bulk lists.
- Bulk payments or bulk transfers must reference an existing Bankline bulk list.
- There can only be one bulk payment or bulk transfer in any one file (a single debit record followed by one or more credit records).

For payments and templates, you can include up to 4,000 records in the same file.

For bulk payments and bulk lists, you can include up to 3,000 beneficiaries.

Files can be up to a size of 10MB. Even if your file does not contain the maximum number of records, if it's larger than 10MB it may be rejected.

2 Import data table – Guidance notes

2.1 General

Unless specified, if a field is populated with a valid value, it does not need to be padded to reach the full character length for the field.

Some fields in the import data table are shown as being not applicable for any of the import records. This is deliberate, with these fields having been reserved for future use.

2.2 Notation

We've used the following notations throughout the import data tables.

Scenario	Notation
When defining the size of a field	• 'a' denotes that the field is alphabetic. • 'n' denotes that the field is numeric. • 'x' denotes that the field is alphanumeric.
When defining the validity of a field	• 'M' denotes that the field is mandatory. • 'O' denotes that the field is optional. • 'C' denotes that the field is conditional. • '-' denotes that the field should not be present.
When defining the payment type	• 'FP' denotes a Faster Payment. • 'CHP' denotes a CHAPS payment. • 'Trf' denotes a transfer. • 'Intl' denotes an international payment. • 'DR' denotes a bulk list debit. • 'CR' denotes a bulk list credit.

2.3 Character sets

For Faster Payments (including bulk lists) and sterling transfer payment types, any free format fields are limited to the following character set:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
0	1	2	3	4	5	6	7	8	9	.	-	/	&												

The last character (blank box) is a space.

For CHAPS, currency transfers and international payment types, any free format fields are limited to the following character set:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
a	b	c	d	e	f	g	h	i	j	k	l	m	n	o	p	q	r	s	t	u	v	w	x	y	z
0	1	2	3	4	5	6	7	8	9	.	-	/	?	:	(	)	,	+	'						

The last character (blank box) is a space.

Please note, if the data includes a comma, then the whole field must be placed within quotation marks. The quotation marks are included when the field is checked for size.

For example:

12, High Street would have to be supplied as “12, High Street”

2.4 Debit and charge account format

These account formatting rules apply to the debit account (as represented by the debit Account identifier in field T010) and the debit charges account (as represented by the debit charges Account identifier in field T011).

Payment type	Formatting rules										
Faster Payments	For these payment types, the debit account is always a UK sterling account. The sort code and account number should be populated in field T010 in the format ‘6n8n’ i.e., a six-digit sort code followed by an eight-digit account number.										
CHAPS payments											
Bulk payments (Faster Payments)											
Bulk transfers											
Ad hoc bulk payments (Faster Payments)											
Transfers	For sterling transfers, the debit account is always a UK sterling account. For such payments, the sort code and account number should be populated in field T010 in the format ‘6n8n’. For currency transfers, the debit account may be either a UK sterling account or a currency account. - For a UK sterling account, the sort code and account number should be populated in field T010 in the format ‘6n8n’. - For an NWB currency account, the account number format should be ‘3n/2n/8n’. For an RBS currency account, the account number should be populated in field T010 in the format ‘8x3x3x’ i.e., an (up to) eight-character customer key, followed by a three-character currency key and then a (up to) three-character suffix.										
International payments	For these payment types, the debit account may either be a UK sterling account or a currency account. For a UK sterling account, the sort code and account number should be populated in field T010 in the format ‘6n8n’. For an NWB currency account, the account format should be ‘3n/2n/8n’. For an RBS currency account, the account number should be populated in field T010 in the format ‘8x3x3x’ i.e., an (up to) eight-character customer key, followed by a three-character currency key and then a (up to) three-character suffix. For an IBAN, which can be used for both UK sterling and currency accounts, the IBAN should be populated in field T010 in the example format: NWB: GBnnNWBK12345612345678 RBS: GBnnRBOS12345612345678 <table><tr><th>Country Code</th><th>Check Digits</th><th>Bank Code</th><th>Sort Code</th><th>Account No.</th></tr><tr><td>GB</td><td>(2 digit number)</td><td>RBOS or NWBK</td><td>123456</td><td>12345678</td></tr></table> If you don’t know the IBAN for an account, it can be found on your bank statement or on the payments pages when you select a ‘From’ account. The debit charges account may be entered in field T011 in either UK sterling or currency account format.	Country Code	Check Digits	Bank Code	Sort Code	Account No.	GB	(2 digit number)	RBOS or NWBK	123456	12345678
Country Code	Check Digits	Bank Code	Sort Code	Account No.							
GB	(2 digit number)	RBOS or NWBK	123456	12345678							

2.5 Credit account format

These account formatting rules apply to the credit account (as represented by a combination of the account with the bank identifier in field T022 and the payee account number in field T028).

Payment type	Formatting rules
Faster Payments, CHAPS payments, Bulk payments (Faster payments), Bulk Transfers (IATs) and Ad hoc bulk payments (Faster Payments)	For these payment types, the credit account is always a UK sterling account. The sort code should be populated in field T022 (in the format '6n') and the account number in field T028 (in the format '8n').
Transfers	For sterling transfers the credit account is always a UK Sterling account. For such payments, the sort code should be populated in field T022 (in the format '6n') and the account number in field T028 (in the format '8n'). For currency transfers the credit account may either be a UK sterling account or currency account - For a UK sterling account, the sort code should be populated in field T022 (in the format '6n') and the account number should be populated in field T028 (in the format '8n'). - For a currency account field T022 should not be populated, and the account number should be populated in field T028. For an NWB currency account, the format is '3n/2n/8n'. For a RBS currency account the format is '8x3x3x' i.e. an (up to) eight-character customer key, followed by a three-character currency key and then a (up to) three-character suffix.
International payments	For these payment types the credit account will most commonly be a non-UK account but may also be a UK sterling or UK currency account. In general, it's recommended that wherever possible a BIC be populated in field T022 with a corresponding IBAN in field T028, both in a format appropriate for the destination country (field T007). For any 8-character BIC, please append this with XXX i.e., for ULSBIE2D populate as ULSBIE2DXXX. This is especially true for payments to Europe or other countries that support the use of IBANs, where failure to adhere to this format may impact delivery timescales or increase payment charges. However, alternative options are available for specifying the credit account: - For a UK currency account or a non-UK account an NCC may be populated in field T022 and an account number populated in field T028, both in a format appropriate for the destination country (field T007). - If the payment routes as SEPA (see Glossary of terms) then BIC in T022 is optional and, if omitted, BIC will be derived from the IBAN in T028.

2.6 Codewords

These rules apply to additional codewords (fields T048, T050, through to T066) and additional codewords text (fields T049, T051, through to T067).

Additional codewords should only be used where strictly necessary, as their use can delay the payment, prevent SEPA routing where available and increase payment charges.

Furthermore, where a codeword requires an action from the receiving bank, the codeword should only be used if the receiving bank has already agreed in advance that they will act on the codeword in question.

Finally, certain combinations of codewords are not permitted. For further information on usage of codewords please refer to the SWIFT handbook.

Codeword	Definition	Additional text
CORT	Settlement of a trade e.g., FX deal or securities transaction	–
INTC	Intra-company payment	–
PHOB	Advise payee by phone	Optional
TELB	Advise payee by most efficient means	Optional
PHON	Advise account with Institution by phone	Optional

2.7 Extended data – Address validation rules (international, SEPA & CHAPS payments only)

Structured and hybrid addresses are now available for SEPA routed international payments, non-SEPA international payments and CHAPS payments.

For SEPA payments, structured or hybrid addresses can be provided for the payee/beneficiary address.

For CHAPS and non-SEPA international payments, structured or hybrid addresses can be provided for the payee/beneficiary address and 'by order of' address.

Party identifier	Structured address	Hybrid address	Un-Structured address**
Payee/beneficiary address	T083–T096	T083–T096 and T031, T032	T031, T032, T033
By order of address (Financial institutions only)	T126–T139	T126–T139 and T080, T081	T080, T081, T082

For each Party Identifier:

- If a structured address is provided, then the town name and country become mandatory.
- If a hybrid address is provided, then the town name and country become mandatory.
- If a hybrid address is provided, then a maximum of two occurrences of an unstructured address line are allowed.

2.8 Extended data – Ultimate Debtor/Creditor name validation (SEPA CT and non-SEPA international payments only)

International payments will allow the use of the optional fields from October 2026:

Party Identifier	Structured Address	Un-Structured Address
Ultimate Debtor Name	T142	N/A
Ultimate Creditor Name	T157	N/A

2.9 Extended data – Ultimate Debtor/Creditor address validation (CHAPS payments only)

Party Identifier	Structured Address	Un-Structured Address
Ultimate Debtor Address	T143–T155	N/A
Ultimate Creditor Address	T158–T170	N/A

For each Party Identifier:

- When a structured address is provided the town name and country become mandatory.
- When a structured address is provided the name becomes mandatory.

Supported Fields for Ultimate Debtor and Ultimate Creditor

Please note that we currently support the following fields. If data is included in any of the other fields, it won't be sent with the payment.

- Name
- Street Name
- Building Number
- Postcode
- Town Name
- Country

2.10 Extended data – How do I enter the purpose code? (CHAPS and SEPA payments)

Purpose codes are four letter codes which are carried across the payment chain, making it clear what the payment is for. The code will be visible to the banks processing the payment and to your payee.

Purpose codes are entered in **Field T098**.

Purpose codes most directly related to property payments will be mandated from May'25 by the Bank Of England.

Property purpose codes List:

- HLRP – Property Loan Repayment.
- HLST – Property Loan Settlement.
- PLDS – Property Loan Disbursement.
- PDEP – Property Deposit.
- PCOM – Property Completion Payment.
- PLRF – Property Loan Refinancing.

For a list of all acceptable purpose codes please refer to the link below:

<https://www.bankofengland.co.uk/-/media/boe/files/payments/rtgs-renewal-programme/iso-20022/uk-recommended-purpose-code-list.pdf>

2.11 Extended data – What is a Legal Entity Identifier?

An LEI (Legal Entity Identifier) is a global standard identification code for businesses. They provide clear identification of parties in a transaction and better risk assessment for business transactions. They are exactly 20 characters long, consisting of a mix of eighteen letters or numbers, finishing with two numbers. For example – RR3QWICWWIPCS8A4S074

Rules for CHAPS payments

For all Bankline customers

If you need to add your LEI and a payee LEI to a CHAPS payment, you'll be able to include them in the fields below:

Field	Where you'll see this in Bankline	Outgoing payment message
T141 – Your LEI	Your LEI	Debtor LEI
T097 – Beneficiary LEI	Payee/beneficiary LEI	Creditor LEI

For Bankline Financial Institution customers only

If you're a Financial Institution customer and you're making CHAPS payments on behalf of your own customers (from a debit account set up for you by the bank for this purpose), you'll be able to include LEIs in the fields below:

Field	Where you'll see this in Bankline	Outgoing payment message
T141 – By order of LEI	By order of LEI When you have also provided a 'By order of account / name / address' for a payment you're making on behalf of your own customer	Debtor LEI
T097 – Payee/beneficiary LEI	Payee/beneficiary LEI	Creditor LEI
T140 – Ordering institution LEI	Your LEI This can be used to provide your own LEI details when you're making a payment on behalf of your customer	Debtor agent LEI

Rules for SEPA and non-SEPA International payments

If you need to add yours and/or a payee LEI to a SEPA International payment, you'll be able to include them in the fields below:

Field	Where you'll see this in Bankline	Outgoing payment message
T141 – Your LEI	Your LEI	Debtor LEI
T097 – Beneficiary/payee LEI	Payee/beneficiary LEI	Creditor LEI

Full details for all LEIs can be found in section 3.

2.12 Extended data – Equivalent amount and Currency of transfer

If you're making an international transaction (SEPA or non-SEPA international payments and currency transfers between your own accounts) that involves a currency exchange, you can use 'Equivalent amount' (T175) and 'Currency of transfer' (T176) instead of 'Payment amount' (T014) and 'Payment currency' (T013).

Whether you use 'Payment amount' or 'Equivalent amount', you must use one of them.

These fields can be used to indicate the amount you wish to be charged from your account.

'Equivalent amount' (T175) tells us the amount that should be charged from your account. If you use this field instead of the 'Payment amount' (T014) field, keep T014 blank.

'Currency of transfer' (T176) tells us the currency that you'll be sending your payee. It appears instead of 'Credit currency' (T042) once it's imported in Bankline.

Conditions of use

- 'Payment currency' (T013) and 'Credit currency' (T042) are still mandatory, even if you're using the new optional fields (see example), and you can't leave them blank.
- You can continue to use the existing fields - 'Payment amount' (T014) and 'Payment currency' (T013) – even when there's a currency exchange.
- If you use the 'Payment amount' field (T014), then the value of 'Payment currency' (T013) can be the same as the debit account or it can be the same as the 'Credit currency' (T042) of your payee.

- If 'Payment currency' (T013) matches the 'Credit currency' (T042) of your payee (for international payments) or the currency of the account you're transferring your money to (for currency transfers), the amount sent will appear in the payment message as 'Instructed amount'.
- If 'Payment currency' (T013) matches the currency of the debit account you're using, the amount sent will appear in the payment message as 'Equivalent amount', as it will indicate how much you'll be charged from your debit account.
- If you're using the 'Equivalent amount' field (T175), then 'Payment currency' (T013) must be different from 'Currency of transfer' (T176) (see example), and 'Payment currency' (T013) must always match the currency of your debit account.
- In this case, the payment will be made using the value in 'Currency of transfer' (T176), which would be the same as that of 'Credit currency' (T042). If you add a different value in 'Credit currency' (T042) and in 'Currency of transfer' (T176), then 'Credit currency' (T042) will be disregarded.
- 'Equivalent amount' (T175) and 'Currency of transfer' (T176) are optional fields, but you can't use them separately: either both 'Equivalent amount' (T175) and 'Currency of transfer' (T176) or neither of these two fields must be used for the same payment.

Example

I want to send GBP100.00 from my GBP account, in USD, using the optional fields 'Equivalent amount' and 'Currency of transfer':

Field	Field description	Value example
T013	Payment currency	GBP
T014	Payment amount	–
T042	Credit currency	USD
T175	Equivalent amount	100.00
T176	Currency of transfer	USD

2.13 Rules for SEPA payments

A SEPA payment is a standard international payment sent in Euros to a SEPA-reachable payee IBAN located within the SEPA-zone. The SEPA-zone consists of all the countries in the EU plus Iceland, Liechtenstein, Norway, Switzerland, Andorra, Monaco, San Marino, the Vatican City State and the UK, including UK Crown dependencies.

When importing SEPA payments, follow these specific rules:

- The payment charges must be set to shared. This means you'll pay the debit charges, and the payee will pay the credit charges. T012 should be set to 'SHA' or no value added.
- There must be no use of an intermediary institution (T043 must be blank).
- You'll need to set the payment priority to 'Standard priority', not 'Urgent'. T008 should always be populated with 'N'.
- You can use 'Structured address' and 'Structured remittance' for SEPA international payments.

2.14 Extended data – Purpose of payment and Reason of payment

- For non-SEPA international payments, you must include a purpose code for some destination countries. From October 2026, there will be a specific field for 'Purpose of payment' (T177). You can use this field instead of using 'Information for the beneficiary field' (T037).
- A new field has also been created for 'Reason for payment' (T178). This is mandatory for many of the same countries that require a purpose code.
- For a few combinations of destination country and currency, you must include the purpose code in the 'Information for the beneficiary' (T037) field, using the fixed text 'BENEFRES/XX/XXXXXXXXXX'.
- T177 Purpose code – Each country has a list of valid codes, which may contain letters and/or numbers. Up to 10 characters.
- T178 Reason for payment – A free text field where you'll need to provide a description of the reason for the payment. Up to 35 characters.
- For countries where the 'Purpose of payment' (T177) and 'Reason for payment' (T178) are required, these fields are mandatory.
- For other country and currency combinations where only either 'Purpose of payment (T177) or 'Reason of payment' (T178) are required, you'll need to use either one of these fields as needed. When only one of them is mandatory, you can still add information in the other one as optional.
- For any other country, these fields are optional. You can use them to include additional information or leave them blank.
- You can find the requirements for each country in our Bankline FAQs. If you search by your destination country, you'll find details about what fields are mandatory and if any other requirements apply. Always confirm any necessary information with your payee before you make a payment.

3 Import data table

Field tag		Field name and notes	Payment				Payment template				Payment from template				Bulk List		Payment/ Trf from Bulk List		Ad Hoc Bulk Payment	
			FP	CHP	Trf	Intl	FP	CHP	Trf	Intl	FP	CHP	Trf	Intl	DR	CR	DR	CR	DR	CR
H001	16x	Originating customer identifier This field is reserved for internal use only and should not be populated.	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
H002	50x	Import file name This tag is ignored. The file name defaults to the physical import file name.	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O
H003	4x	Bank identifier This field is reserved for internal use only and should not be populated.	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
T001	2n	Record type Identifies the underlying payment type being imported. Valid values are: '01' = Faster Payment. '02' = CHAPS payment. '03' = Transfer. '04' = International payment. '06' = Bulk list debit. '07' = Bulk list credit. '08' = Ad hoc bulk payment debit. '09' = Ad hoc bulk payment credit.	M	M	M	M	M	M	M	M	M	M	M	M	M	M	M	M	M	M
T002	1a	Template indicator Identifies the import of a new template or bulk list. The only valid value is 'T' or 'E' indicating that this is a new template or bulk list. The value of 'E' indicates that the debit account may be edited when making a payment and is only allowed if the corresponding payment preference 'Allow debit accounts to be edited on bulk list and template payments' is enabled.	-	-	-	-	M	M	M	M	-	-	-	-	M	-	-	-	-	-

Field tag	Field name and notes	Payment				Payment template				Payment from template				Bulk List		Payment/ Trf from Bulk List		Ad Hoc Bulk Payment	
		FP	CHP	Trf	Intl	FP	CHP	Trf	Intl	FP	CHP	Trf	Intl	DR	CR	DR	CR	DR	CR
		If you're importing multiple templates, please note that the value of T or E for the first template will be used to set the value for all templates in the same file.																	
T003	20x	Template reference Identifies the template being used in the import of a new template or a payment from an existing template. Also identifies the bulk list being used in the import of a new bulk list or a payment/transfer from an existing bulk list. This is a free format field. However, the field size is limited to '18x' for the bulk list record type.	-	-	-	-	M	M	M	M	M	M	M	M	-	M	-	-	-
T004	1a	Confidential indicator Identifies whether a new bulk list is to be marked as confidential or not. Valid values are: 'Y' = confidential. 'N' = not confidential. For an Ad Hoc bulk list, if left blank the field T004 will default to 'N'.	-	-	-	-	-	-	-	-	-	-	-	M	-	-	-	O	-
T005	25x	Beneficiary/payee identifier Identifies, in addition to the payee name, each payee on a bulk list or bulk payment. This is a free format field. This field should only be populated for Faster Payment bulk payments and Faster Payment bulk lists.	-	-	-	-	-	-	-	-	-	-	-	-	C	-	C	-	-
T006	18x	Customer payment reference Identifies the payment as you'll see in your statement. This is a free format field. However, the field size is limited	O	O	O	O	O	O	O	O	O	O	O	-	-	-	-	O	-

		rate (field T036) must also be supplied.																		
T036	15n	Foreign exchange (FX) deal exchange rate Identifies the exchange rate of any FX deal associated with the payment. Valid value is an amount in the format 8n.7n. This means there may be up to 8 digits before the decimal point and up to 7 digits after the decimal point. If an FX deal exchange rate is supplied then a corresponding FX deal reference (field T035) must also be supplied.	-	-	C	C	-	-	-	-	-	-	C	C	-	-	-	-	-	-
T037	35x	Information for the beneficiary/payee line 1 Payment details that will help identify the payment to the payee. This is a format-free field. However, the field size is limited to ‘16x’ for the transfer record type. If left blank for the transfer record type field T037 defaults to the debit account name as held in Bankline for the debit account identifier (field T010). Please ensure that information for the payee is completed in line order. Please ensure you add information for the payee (e.g., invoice number, customer number) in order to comply with industry best practice. Failure to do so may make it difficult for the identify who has sent the payment. For certain countries it’s mandatory to provide a purpose of payment in this field. Search our Bankline FAQs with the country you’re sending the payment to.	-	O	O	O	-	O	O	O	-	O	O	O	-	-	-	-	-	-

For non-SEPA international payments, if are in use, T014 must be left blank. See section 2.11 for more information. Must be used when T176 is present																	
T176	3a	Currency of transfer For international (SEPA and non-SEPA) payments and currency transfers, this is the currency that will be sent to the payee. It must be																	

4 Examples

4.1 Introduction

The following examples demonstrate how to structure and populate an import record, for a selection of payment types.

In section 1.2 we explained that there are four different file lengths that Bankline supports. To simplify how the examples are presented, we've used the file length that is required to accommodate the fields that need to be populated for each type of payment. Please note, you can use the 'longer' supported file lengths without issue. We have done this so that if you have a mix of payments to make, you don't need to separate them into different files.

4.2 Transfer (sterling)

The example below shows how to format the import record. Please note that all the file lengths explained in section 1.2 can be used:

```
,,03,,,,DEBIT REF,,,60000012345678,,,GBP,4.55,16012025,,,,,,,,600000,,,,,87654321,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
```

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013	GBP	T028	87654321	T043		T058		T073	
H002		T014	4.55	T029		T044		T059		T074	
H003		T015	16012025	T030		T045		T060		T075	
T001	03	T016		T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003		T018		T033		T048		T063		T078	
T004		T019		T034		T049		T064		T079	
T005		T020		T035		T050		T065		T080	
T006	DEBIT REF	T021		T036		T051		T066		T081	
T007		T022	600000	T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010	60000012345678	T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Transfer (sterling)

- T001 (record type) – The value '03' identifies a transfer. If field T003 (Template reference) had also been populated then this would have become an transfer from an existing transfer template.
- T006 (customer payment reference) – This is the debit account reference. If no reference is entered then we will insert the credit account name by default.
- T010 (debit account identifier) – The value '60000012345678' is a UK sterling account with sort code 60-00-00 and account number 12345678. No dashes or spaces are required when entering the sort code, or between the sort code and account number. The debit account must be a valid account registered in Bankline.
- T014 (payment amount) – No blank spaces before the numbers are required when quoting the payment amount, and the decimal point is necessary only where the payment amount requires it.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T022 (account with bank identifier) – The value '600000' is the UK sterling sort code 60-00-00.
- T028 (payee account number) – This is the credit account number held at the account with bank identifier quoted in field T022.

4.3 Transfer (non-sterling currency)

The example below shows how to format the import record. Please note that all the file lengths explained in section 1.2 can be used:

03,DEBIT REF,60000012345678,GBP,4.55,16012025,140/00/12345678,

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013	USD	T028	140/00/12345678	T043		T058		T073	
H002		T014	4.55	T029		T044		T059		T074	
H003		T015	16012025	T030		T045		T060		T075	
T001	03	T016		T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003		T018		T033		T048		T063		T078

T012		T027		T042		T057		T072			

Transfer (non-sterling currency)

- T001 (record type) – The value '03' identifies a transfer. If field T003 (template reference) had also been populated, then this would have become transfer from an existing transfer template.
- T006 (customer payment reference) – This is the debit account reference. If no reference is entered, then we will insert the credit account name by default.
- T010 (debit account identifier) – The value '60000012345678' is a UK sterling account with sort code 60-00-00 and account number 12345678. No dashes or spaces are required when entering the sort code, or between the sort code and account number. The debit account must be a valid account registered in Bankline.
- T013 (payment currency) – The value USD is the ISO currency code for US Dollars. To make the transfer as Instructed amount, the currency in this field must match the credit account currency.
- T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. The payment amount should be in the currency quoted in field T013.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T028 (payee account number) – This is the credit account number. The value 140/00/12345678 is a USD currency account in the '3n/2n/8n' format.

4.4 Transfer (non-sterling currency) with Equivalent Amount and Currency of Transfer

The example below shows how to format the import record. Please note that all the file lengths explained in section 1.2 can be used:

```

,,,03,,,DEBIT REF,,,60000012345678,,,GBP,,,16012025,,,,,,,,,,,,,140/00/12345678,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,10.01,USD

```

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value

Transfer (non-sterling currency) with equivalent amount and currency of transfer

- T001 (record type) – The value '03' identifies a transfer. If field T003 (template reference) had also been populated, then this would have become transfer from an existing transfer template.
- T006 (customer payment reference) – This is the debit account reference. If no reference is entered, then we will insert the credit account name by default.
- T010 (debit account identifier) – The value '60000012345678' is a UK sterling account with sort code 60-00-00 and account number 12345678. No dashes or spaces are required when entering the sort code, or between the sort code and account number. The debit account must be a valid account registered in Bankline.
- T013 (payment currency) – The value GBP is the ISO currency code for pound sterling.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T028 (payee account number) – This is the credit account number. The value 140/00/12345678 is a USD currency account in the '3n/2n/8n' format.
- T175 (equivalent amount – This is used in place of T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. The payment amount should be in the currency quoted in field T013.
- T176 (currency of transfer) – This must match the currency of the credit account. USD is the ISO 3-letter code for US Dollars

Faster Payment

- T001 (record type) – The value '01' identifies a Faster Payment. If field T003 (template reference) had also been populated, then this would have become a Faster Payment from an existing Faster Payment template.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60-10-00 and account number 87654321. No dashes or spaces are required when entering the sort code, or between the sort code and account number. The debit account must be a valid account registered in Bankline.
- T014 (payment amount) – No blank spaces before the numbers are required when quoting the payment amount, and the decimal point is necessary only where the payment amount requires it. For a Faster Payment field T013 (payment currency) need not be completed as the ISO currency code GBP will be automatically associated with the payment amount in field T014.
- T016 (date payment to arrive/credit date) – The value '16012025' equates to 16 January 2025.
- T022 (account with bank identifier) – The value '151000' is the UK sterling sort code 15-10-00. As detailed above in field T001 this import record is in respect of a Faster Payment, therefore the account with bank identifier must be a valid sort code for the Faster Payments receipt.
- T028 (payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T030 (payee name) – This is the name of the payee customer linked to the payee account number quoted in field T028. Failure to enter a payee name may make it difficult to direct the payment to the correct account.
- T034 (payee reference) – This is the reference that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add a payee reference (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who has sent the payment. If no payee reference is entered, then we will insert the debit account name by default.

4.6 Faster Payment template (Template only)

The example below shows how to format the import record. Please note that all the file lengths explained in section 1.2 can be used:

```
,,,01,T,STANDARD TEMP 01,,,,,,,,60100087654321,,,GBP,,,,,,,,151000,,,,,,12345678,,MR JOHN SMITH,,,,INVOICE 1234,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
```

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013	GBP	T028	12345678	T043		T058		T073	
H002		T014		T029		T044		T059		T074	
H003		T015		T030	MR JOHN SMITH	T045		T060		T075	
T001	01	T016		T031		T046		T061		T076	
T002	T	T017		T032		T047		T062		T077	
T003	STANDARD TEMP 01	T018		T033		T048		T063		T078	
T004		T019		T034	INVOICE 1234	T049		T064		T079	
T005		T020		T035		T050		T065		T080	
T006		T021		T036		T051		T066		T081	
T007		T022	151000	T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010	60100087654321	T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Faster Payment template (Template only)

- T001 (record type) and T002 (template indicator) – The value '01' in field T001 identifies the Faster Payment type, and the value 'T' in field T002 identifies that this is a new Faster Payment template.
- T003 (template reference) – The value 'STANDARD TEMP 01' is how the template will be known in Bankline.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60-10-00 and account number 87654321. No dashes or spaces are required when entering the sort code, or between the sort code and account number. The debit account must be a valid account registered in Bankline.
- T013 (payment currency) – This will always be 'GBP' for a Faster Payment template.
- T022 (account with bank identifier) – The value '151000' is the UK Sterling sort code 15-10-00. As detailed above in field T001, this import record is in respect of the Faster Payment type, therefore the account with bank identifier must be a valid sort code for the receipt of Faster Payments.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T030 (beneficiary/payee name) – This is the name of the payee customer linked to the payee account number quoted in field T028. For a Faster Payment, the payee name should be quoted, for other payment types the payee address can also be quoted. Failure to enter a payee name may make it difficult to direct the payment to the correct account.
- T034 (beneficiary/payee reference) – This is the reference that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add a payee reference (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment. If no payee reference is entered, then we will insert the debit account name by default.

4.7 Faster Payment from a template

The example below shows how to format the import record. Please note that all the file lengths explained in section 1.2 can be used:

,,,01,,STANDARD TEMP 01,,,,,,,,60100087654321,,,GBP,166.42,,16012025,,,,,,,,,,,,,INVOICE 1234,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013	GBP	T028		T043		T058		T073	
H002		T014	166.42	T029		T044		T059		T074	
H003		T015		T030		T045		T060		T075	
T001	01	T016	16012025	T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003	STANDARD TEMP 01	T018		T033		T048		T063		T078	
T004		T019		T034	INVOICE 1234	T049		T064		T079	
T005		T020		T035		T050		T065		T080	
T006		T021		T036		T051		T066		T081	
T007		T022		T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010	60100087654321	T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Faster Payment from a template

- T001 (record type) and T003 (template reference) – The value '01' in field T001 identifies the Faster Payment type, and the value 'STANDARD TEMP 01' in field T003 identifies that it is a Faster Payment from an existing Faster Payment template (of that name).
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60-10-00 and account number 87654321. No dashes or spaces are required when entering the sort code or between sort code and account number. The debit account must be a valid account registered in Bankline.
- T013 (payment currency) – This will always be 'GBP' for a Faster Payment from a template.
- T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount and the decimal point is only necessary where the payment amount requires it. The payment amount is in the currency quoted in field T013.
- T016 (date payment to arrive/credit date) – The value '16012025' equates to 16 January 2025.
- T034 (beneficiary/payee reference) – This is the reference that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add a payee reference (e.g., invoice number, customer number) in order to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment. When making a payment from a template it is recommended that you review this to ensure it is specific for this payment and if required, consider updating.

CHAPS payment

- T001 (record type) – The value '02' identifies a CHAPS payment. If field T003 (template reference) had also been populated then this would have become a CHAPS payment from an existing CHAPS payment template.
- T006 (customer payment reference) – This is an optional field.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60-10-00 and account number 87654321. No dashes or spaces are required when entering the sort code or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. For a CHAPS payment field T013 (payment currency) need not be completed as the ISO currency code GBP will be automatically associated with the payment amount in field T014.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T022 (account with Bank identifier) – The value '151000' is the UK sterling sort code 15-10-00. As detailed above in field T001 this import record is in respect of a CHAPS payment, therefore the account with bank identifier must be a valid sort code for the receipt of CHAPS payments.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T030 (beneficiary/payee name and address line 1) – This is the name of the payee customer linked to the payee account number quoted in field T028. For a CHAPS payment up to three additional lines of payee address information may be quoted in fields T031, T032 and T033.
- T037 (information for the beneficiary/payee line 1) – This is information that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add information for the payee (e.g., invoice number, customer number) in order to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment.
- T038 (information for the beneficiary/payee line 2), T039 (information for the beneficiary/payee line 3) and T040 (information for the beneficiary/payee line 4) – These are optional fields.

4.9 CHAPS payment – with partial use of extended data (purpose code, payee structured address, your LEI and payee LEI)

The example below shows how to format the import record:

```

CHAPS payment – with partial use of extended data (purpose code, payee structured address and payee Legal Entity Identifier)

- T001 (record type) – The value '02' identifies a CHAPS payment.
- T006 (customer payment reference) – This is an optional field.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60 10 00 and account number 87654321. No dashes or spaces are required when entering the sort code or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. For a CHAPS payment field T013 (payment currency) does not need to be completed as the ISO currency code GBP will be automatically associated with the payment amount in field T014.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T022 (account with bank identifier) – The value '609242' is the UK sterling sort code 60 92 42. As detailed above in field T001 this import record is in respect of a CHAPS payment, therefore the account with bank identifier must be a valid sort code for the receipt of CHAPS payments.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T030 (beneficiary name and address line 1) – This is the name of the payee customer linked to the payee account number quoted in field T028.
- T037 (information for the beneficiary/payee line 1) – This is information that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add information for the payee (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment.
- T038 (information for the beneficiary/payee line 2), T039 (information for the beneficiary/payee line 3) and T040 (information for the beneficiary/payee line 4) – These are optional fields.
- T083-T096 (beneficiary/payee structured address) – The address of the payee entered in a structured format. You can find more information about the use of structured addresses in section 2.7.
- T097 (beneficiary/payee LEI) – is the Legal Entity Identifier (LEI) for the payee, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – RR3QWICWWIPCS8A4S074.
- T098 (purpose code) – Identifies the reason for the payment, as published in an external purpose code list. A valid purpose code should be of four characters, and it's required for certain property related CHAPS payments.
- T141 (your LEI) – is the Legal Entity Identifier (LEI) for the debtor, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – YO3QWICWWIPCS8A4S074.

CHAPS payment – with extended data

- T001 (record type) – The value '02' identifies a CHAPS payment.
- T006 (customer payment reference) – This is an optional field.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60 10 00 and account number 87654321. No dashes or spaces are required when entering the sort code or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. For a CHAPS payment field T013 (payment currency) does not need to be completed as the ISO currency code GBP will be automatically associated with the payment amount in field T014.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T022 (account with bank identifier) – The value '609242' is the UK sterling sort code 60 92 42. As detailed above in field T001 this import record is in respect of a CHAPS payment, therefore the account with Bank identifier must be a valid sort code for the receipt of CHAPS payments.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T030 (beneficiary/payee name and address line 1) – This is the name of the payee customer linked to the payee account number quoted in field T028.
- T083-T096 (beneficiary/payee structured address) – The address of the payee entered in a structured format. You can find more information about the use of structured addresses in section 2.7.
- T097 (beneficiary/payee LEI) – is the Legal Entity Identifier (LEI) for the payee, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – RR3QWICWWIPCS8A4S074.
- T098 (purpose code) – Identifies the reason for the payment, as published in an external purpose code list. A valid purpose code should be of four characters, and it's required for certain property-related CHAPS payments.
- T103 (structured remittance creditor reference) – This is information that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add information for the payee (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment.
- T141 (your LEI) – is the Legal Entity Identifier (LEI) for the debtor, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – YO3QWICWWIPCS8A4S074.
- T142-T156 (ultimate debtor) – The address of the ultimate debtor entered in a structured format. You can find more information about the use of structured addresses in section 2.8.
- T151-T171 (ultimate creditor) – The address of the ultimate creditor entered in a structured format. You can find more information about the use of structured addresses in section 2.8.

CHAPS payment – with extended data and by order of details (financial institution customers only)

- T001 (record type) – The value '02' identifies a CHAPS payment. If field T003 (template reference) had also been populated then this would have become a CHAPS payment from an existing CHAPS payment template.
- T006 (customer payment preference) – This is an optional field.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60 10 00 and account number 87654321. No dashes or spaces are required when entering the sort code or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. For a CHAPS payment field T013 (payment currency) does not need to be completed as the ISO currency code GBP will be automatically associated with the payment amount in field T014.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T017 (ordering Institution BIC) – The value equates to 'ABCDGB2LXXX'
- T022 (account with bank identifier) – The value '609242' is the UK sterling sort code 60 92 42. As detailed in field T001 this import record is in respect of a CHAPS payment, so the account with bank identifier must be a valid sort code for the receipt of CHAPS payments.
- T028 (Beneficiary/payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T030 (Ben/payee name and add. line 1) – This is the name of the payee customer linked to the payee account number quoted in field T028.
- T078 – T079 (by order of account & name) – This is the by order of account number (IBAN) and name. This information is mandatory when a by order of structured address is provided (T126 – T138).
- T083-T096 (beneficiary/payee structured address) – The address of the payee entered in a structured format. You can find more information about the use of structured addresses in section 2.7.
- T097 (beneficiary/payee LEI) – is the Legal Entity Identifier (LEI) for the payee, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – RR3QWICWWIPCS8A4S074.
- T098 (purpose code) – Identifies the reason for the payment, as published in an external purpose code list. A valid purpose code should be of four characters, and it's required for certain property related CHAPS payments.
- T103 (structured remittance creditor reference) – This is information that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add Information for the payee (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment.
- T126 – T139 (structured by order of address) – Identifies the address of the originating customer. This field is mandatory for financial institution customers. You can find more information about the use of structured addresses in section 2.7.
- T140 (ordering institution LEI) – is the Legal Entity Identifier (LEI) for the ordering Institution, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – OI3QWICWWIPCS8A4S074. For use by financial institution Customers only.
- T141 (by order of LEI) – is the Legal Entity Identifier (LEI) for the debtor, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – BO3QWICWWIPCS8A4S074. For use by financial institution customers only.
- T142-T156 (ultimate debtor) – The address of the ultimate debtor entered in a structured format. You can find more information about the use of structured addresses in section 2.8.
- T157-T171 (ultimate creditor) – The address of the ultimate creditor entered in a structured format. You can find more information about the use of structured addresses in section 2.8.

CHAPS payment template – with extended data

- T001 (record type) – The value '02' identifies a CHAPS payment. If field T003 (template reference) had also been provided then this would have become a CHAPS payment from an existing CHAPS payment template.
- T002 (template Indicator) – The value 'T' signifies creating a payment template.
- T003 (template reference) – This is the unique identifier of the template.
- T006 (customer payment reference) – This is an optional field.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60 10 00 and account number 87654321. No dashes or spaces are required when entering the sort code or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T013 (payment currency) – This will always be 'GBP' for a CHAPS payment template.
- T022 (account with bank identifier) – The value '609242' is the UK sterling sort code 60 92 42. As detailed above in field T001 this import record is in respect of a CHAPS payment, therefore the account with bank identifier must be a valid sort code for the receipt of CHAPS payments.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T030 (beneficiary/payee name) – This is the name of the payee customer linked to the payee account number quoted in field T028.
- T037 (information for the payee line 1) – This is information that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add Information for the payee (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment.
- T038 (information for the beneficiary/payee line 2), T039 (information for the beneficiary/payee line 3) and T040 (information for the beneficiary/payee line 4) – These are optional fields.
- T083-T096 (beneficiary/payee structured address) – The address of the payee entered in a structured format. You can find more information about the use of structured addresses in section 2.7.
- T097 (beneficiary/payee LEI) – is the Legal Entity Identifier (LEI) for the payee, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – RR3QWICWWIPCS8A4S074.
- T098 (purpose code) – Identifies the reason for the payment, as published in an external purpose code list. A valid purpose code should be of four characters, and it's required for certain property related CHAPS payments.
- T141 (your LEI) – is the Legal Entity Identifier (LEI) for the debtor, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – YO3QWICWWIPCS8A4S074.

CHAPS payment from template – With extended data

- T001 (record type) – The value '02' identifies a CHAPS payment.
- T003 (template reference) – This is the unique identifier of the template the payment is being made from.
- T006 (customer payment reference) – This is an optional field.
- T010 (debit account identifier) – The value '01000487654321' is a UK sterling account with sort code 01 00 00 and account number 87654321. No dashes or spaces are required when entering the sort code or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T013 (payment currency) – This will always be 'GBP' for a CHAPS payment from a template.
- T014 (payment amount) – No leading spaces are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. For a CHAPS payment field T013 (payment currency) does not need to be completed as the ISO currency code GBP will be automatically associated with the payment amount in field T014.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T037 (information for the beneficiary/payee line 1) – This is information that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please make sure you add information for the payee (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment.
- T038 (information for the beneficiary/payee line 2), T039 (information for the beneficiary/payee line 3) and T040 (information for the beneficiary/payee line 4) – These are optional fields.
- T097 (beneficiary/payee LEI) – is the Legal Entity Identifier (LEI) for the payee, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – RR3QWICWWIPCS8A4S074.
- T098 (purpose code) – Identifies the reason for the payment, as published in an external purpose code list. A valid purpose code should be of four characters, and it's required for certain property related CHAPS payments.

4.14 International payment – Non-SEPA

The example below shows how to format the import record. Please note that all the file lengths explained in section 1.2 can be used:

[illegible]

This is broken down to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value
H001		T013	GBP	T028	440530000000	T043 –T178	Commas must be included up to one of the supported file lengths in section 1.2. For this example, the maximum supported length has been used.

International payment – Non SEPA

- T001 (record type) – The value '04' identifies an international payment. If field T003 (template reference) had also been populated, then this would have become an international payment from an existing international payment template.
- T006 (customer payment reference) – This is an optional field.
- T007 (destination country) – The value 'US' is the ISO country code for the United States of America.
- T008 (priority) – The value 'U' identifies this as an urgent priority payment. All Non-SEPA payments must be U.
- T010 (debit account identifier) – The value '50000012345678' is a UK sterling account with sort code 50 00 00 and account number 12345678. No dashes or spaces are required when entering the sort code or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T011 (debit charges account identifier) – This is used when the charges are to be separately debited from a specified bank account. This is an optional field.
- T012 (charge type code) – The value 'SHA' means that the charges will be shared. The remitter will pay debit charges and the payee will pay credit charges. If left blank field T012 defaults to 'SHA'.
- T013 (payment currency) – The value GBP is the ISO currency code for pound sterling.
- T014 (payment amount) – No leading spaces are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. The payment amount should be in the currency quoted in field T013.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T022 (account with bank identifier) – The value 'CITIUS33CHI ' is the BIC for the payee's bank.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T030 (beneficiary/payee name and address line 1) – This is the name of the payee customer linked to the payee account number quoted in field T028.
- T035 (FX deal reference) and T036 (FX deal exchange rate) – The value '2022012712999' in field T035 is the FX deal reference and the value '1.87' in field T036 is the FX rate associated with that deal reference.
- T037 (information for the beneficiary/payee line 1), T038 (information for the beneficiary/payee line 2), T039 (information for the beneficiary/payee line 3) and T040 (information for the beneficiary/payee line 4) – These are optional fields.
- T042 (credit currency) – The value 'USD' is the ISO currency code for US dollars.

4.15 International payment – Non-SEPA with extended data fields

International payment – Non-SEPA with extended data

- T001 (record type) – The value '04' identifies an international payment.
- T006 (customer payment reference) – The value 'CUSTPAYREF2' is the customer payment reference associated with this payment.
- T007 (destination country) – The value 'IN' is the ISO country code for India.
- T008 (priority) – The value 'U' identifies this as an urgent priority payment. All Non-SEPA payments must be U.
- T010 (debit account identifier) – The value '50000087654321' is a UK sterling account with sort code 50 00 00 and account number 87654321. No dashes or spaces are required between the sort code and account number. The debit account must be a valid account registered in Bankline.
- T012 (charge type code) – The value 'OUR' means that the remitter pays both debit and credit charges.
- T013 (payment currency) – The value 'GBP' is the ISO currency code for pound sterling.
- T015 (execution date) – The value '31032022' equates to 31 March 2022.
- T022 (account with bank identifier) – The value 'INDTIN33XXX' is the BIC/SWIFT code of the beneficiary's bank.
- T028 (beneficiary/payee account number) – The value '440530000000' is the beneficiary account number held with the bank identified in field T022.
- T030 (beneficiary/payee name and address line 1) – The value 'BENENAME' is the beneficiary/payee name.
- T035 (FX deal reference) – The value '2022012712999' is the foreign exchange deal reference associated with the payment.
- T036 (FX deal exchange rate) – The value '1.22' is the exchange rate agreed under the FX deal reference quoted in field T035.
- T037 (information for beneficiary/payee line 1) – The value 'Payee ref In' contains reference information that will be made available to the beneficiary.
- T038 (information for beneficiary/payee line 2) – The value 'Payee ref In 2' contains additional beneficiary reference information.
- T039 (information for beneficiary/payee line 3) – The value 'Payee ref In 3' contains additional beneficiary reference information.
- T040 (information for beneficiary/payee line 4) – The value 'Payee ref In 4' contains additional beneficiary reference information.
- T042 (credit currency) – The value 'INR' is the ISO currency code for Indian Rupees. The beneficiary will receive funds in INR.
- T043 (intermediary bank identifier) – The value 'ULSBGB2LXXX' is the BIC/SWIFT code of the intermediary bank used in the payment routing process.
- T083 (beneficiary department) – The value 'Payee Dept' identifies the department within the beneficiary organisation.
- T084 (beneficiary sub-department) – The value 'Payee Sub Dept' identifies the sub-department within the beneficiary organisation.
- T085 (beneficiary street name) – The value 'Payee Street name' is the street name component of the beneficiary's address.
- T086 (beneficiary building number) – The value 'Payee building no' is the building number component of the beneficiary's address.
- T087 (beneficiary building name) – The value 'Payee building name' is the building name component of the beneficiary's address.
- T088 (beneficiary floor) – The value 'Payee floor' specifies the floor within the building where the beneficiary is located.
- T089 (beneficiary post box) – The value 'Payee post box' specifies the beneficiary's post office box number.
- T090 (beneficiary room) – The value 'Payee room' identifies the room, office or suite number of the beneficiary.
- T091 (beneficiary post code) – The value 'Payee post code' is the postal or ZIP code of the beneficiary's address.
- T092 (beneficiary town name) – The value 'Payee town name' is the town or city name of the beneficiary.
- T093 (beneficiary town location name) – The value 'Payee town location name' provides additional locality information associated with the town or city.
- T094 (beneficiary district name) – The value 'Payee district name' identifies the district or administrative area of the beneficiary's address.
- T095 (beneficiary country subdivision) – The value 'Payee country sub division' identifies the state, province, region or other country subdivision of the beneficiary's address.
- T096 (beneficiary country) – The value 'IN' is the ISO country code for India and identifies the beneficiary's country of residence.
- T175 (equivalent amount) – The value '2500.35' is the regulatory reporting amount associated with the payment. If using this field, T014 must be left blank.
- T176 (currency of transfer) – The value 'INR' is the ISO currency code associated with the regulatory reporting amount. If using this field, T013's currency must match the debit account currency. This field will override the value in T042 if they're different.
- T177 (purpose of payment) – The value 'P0801' is the Indian regulatory purpose code required for reporting the nature of the transaction.
- T178 (reason of payment) – Description of concept for the purpose of payment.

4.16 International payment – SEPA

International payment – SEPA

- T001 (record type) – The value '04' identifies an international payment. If field T003 (Template reference) had also been populated then this would have become an international payment from an existing international payment template.
- T006 (customer payment reference) – This is an optional field.
- T007 (destination country) – The value 'DE' is the ISO country code for the Germany.
- T008 (priority) – The value 'N' identifies this as a normal or standard priority payment.
- T010 (debit account identifier) – The value '50000087654321' is a UK sterling account with sort code 50 00 00 and account number 87654321. No dashes or spaces are required when entering the sort code or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T012 (charge type code) – The value 'SHA' means that the charges will be shared. Remitter will pay debit charges and the payee will pay credit charges. This is a requirement for all SEPA routed payments. If left blank field T012 defaults to 'SHA'.
- T013 (payment currency) – The value GBP is the ISO currency code pound sterling.
- T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount, and the decimal point is only necessary where the payment amount requires it. The payment amount should be in the currency quoted in field T013.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T028 (beneficiary/payee account number) – This is the payee's IBAN.
- T030 (beneficiary/payee name and address line 1) – This is the name of the payee customer linked to the payee account number quoted in field T028.
- T042 (credit currency) – The value 'EUR' is the ISO currency code for euros.
- T083-T096 (beneficiary/payee structured address) – The address of the payee entered in a structured format. You can find more information about the use of structured addresses in section 2.7.
- T097 (beneficiary/payee LEI) – is the Legal Entity Identifier (LEI) for the payee, as an alternate identification for a party. It must be exactly 20 characters long, consisting of a mix of eighteen letters and numbers, finishing with two numbers. For example – RR3QWICWWIPCS8A4S074.
- T100 (structured remittance creditor reference code) – Code for the creditor reference type. Only used for SEPA payments and the code SCOR must be used.
- T103 (structured remittance creditor reference) – This is the information that will be advised to the payee customer and as such should be meaningful, such as an invoice number. Please ensure you add information for the payee (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment.

4.17 Ad hoc bulk payment (Faster Payment) – debit

The example below shows how to format the import record. Please note that all the file lengths explained in section 1.2 can be used:

,,,08,,,,PAYROLLSEP,,,,60100012345678,,,,,16012025,,,,,,,,,,,,,PAYROLL,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013		T028		T043		T058		T073	
H002		T014		T029		T044		T059		T074	
H003		T015		T030		T045		T060		T075	
T001	08	T016	16012025	T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003		T018		T033		T048		T063		T078	
T004		T019		T034	PAYROLL	T049		T064		T079	
T005		T020		T035		T050		T065		T080	
T006	PAYROLLSEP	T021		T036		T051		T066		T081	
T007		T022		T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010	60100012345678	T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Ad hoc bulk payment (Faster Payment) – Debit

- T001 (record type) – The value '08' in field T001 identifies the payment type as an 'ad hoc bulk payment debit'.
- T006 (customer payment reference) – Identifies the payment as it will be known to the remitter. If left blank, it will default to the first 18 characters of the import file name.
- T010 (debit account identifier) – The value '60100012345678' is a UK sterling account with sort code 60 10 00 and account number 12345678. No dashes or spaces are required when entering the sort code, or between the sort code and the account number. The debit account must be a valid account as registered in Bankline.
- T016 (date payment to arrive/credit date) The value '16012025' equates to 16 January 2025.
- T034 (beneficiary/payee reference) – This is the reference that will be advised to the payee customer and should be meaningful e.g., a payroll reference. Note that if an individual payee is given their own reference (as specified on the Faster Payment bulk payment credit) then that will override any reference supplied here. Please ensure you add a payee reference (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment. If no payee reference is entered then we will insert the debit account name by default.

4.18 Ad hoc bulk payment (Faster Payment) – credit

When importing an ad hoc bulk payment debit record, one or more ad hoc bulk payment credit records must be present in the same file. Please note that all the file lengths explained in section 1.2 can be used:

```

,,09,,,,,,,,,GBP,1566.23,,,,,,,,,601000,,,,,12345678,,MR JOHN SMITH,,,,PAYROLL 01,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

```

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013	GBP	T028	12345678	T043		T058		T073	
H002		T014	1566.23	T029		T044		T059		T074	
H003		T015		T030	MR JOHN SMITH	T045		T060		T075	
T001	09	T016		T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003		T018		T033		T048		T063		T078	
T004		T019		T034	PAYROLL 01	T049		T064		T079	
T005		T020		T035		T050		T065		T080	
T006		T021		T036		T051		T066		T081	
T007		T022	601000	T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010		T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Ad hoc bulk payment (Faster Payment) – Credit

- T001 (record type) – The value '09' identifies the payment type as an 'ad hoc bulk payment credit'.
- T013 (payment currency) – This will always be 'GBP' for a Faster Payment bulk payment.
- T014 (payment amount) – No leading spaces are required when entering the payment amount and the decimal point is necessary only where the amount requires it. The payment amount is in the currency in field T013.
- T022 (account with bank identifier) – The value '601000' is the UK sterling sort code 60 10 00.
- T028 (beneficiary/payee account Number) – This is the payee account number held at the account with bank identifier in field T022.
- T030 (beneficiary/payee name) – This is the name of the payee customer linked to the payee account number quoted in field T028. Failure to enter a payee name may make it difficult to direct the payment to the correct account.
- T034 (beneficiary/payee reference) – Identifies the payment as it will be known to the payee. Please ensure you add a payee reference (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment. If left blank, then the payee reference inserted in the debit entry will be used (if present), otherwise we will insert the debit account name by default.

4.19 Faster Payment bulk list (to add a new bulk list, no payments) – Debit

This example shows how to format an import record to create a Bankline Faster Payment bulk list with a single payee. Please note that all the file lengths explained in section 1.2 can be used:

,,,06,T,SALARY MTH END 01,N,,,,,60100087654321,,,,,,,,,,,,,PAYROLL,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013		T028		T043		T058		T073	
H002		T014		T029		T044		T059		T074	
H003		T015		T030		T045		T060		T075	
T001	06	T016		T031		T046		T061		T076	
T002	T	T017		T032		T047		T062		T077	
T003	SALARY MTH END 01	T018		T033		T048		T063		T078	
T004	N	T019		T034	PAYROLL	T049		T064		T079	
T005		T020		T035		T050		T065		T080	
T006		T021		T036		T051		T066		T081	
T007		T022		T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010	60100087654321	T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Faster Payment bulk list – Debit

- T001 (record type) and T002 (template indicator) – The value '06' in field T001 identifies the payment type as a 'bulk list debit', and the value 'T' in field T002 indicates that the import is for a 'bulk list' (not a payment from a bulk list).
- T003 (template reference) – The value 'SALARY MTH END 01' is how the bulk list will be known in Bankline.
- T008 (priority) – This field is used to differentiate Faster Payment bulk lists from IAT bulk lists. In this example, the field has been left blank. When left blank, this value will always default to 'N' for Faster Payment.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60 10 00 and account number 87654321. No dashes or spaces are required when entering the sort code, or between the sort code and the account number. The debit account must be a valid account registered in Bankline.
- T034 (beneficiary/payee reference) – This is the reference that will be advised to the payee customer and should be meaningful e.g., payroll reference. Note that if an individual payee is given their own reference (as specified on the Faster Payment bulk list credit), this will override any reference supplied here for that individual payee. Please ensure you add a payee reference (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment. If no payee reference is entered then we will insert the debit account name by default.

4.20 Faster Payment bulk list – Credit

When importing a bulk list debit record, one or more bulk list credit records must be present in the same file. Please note that all the file lengths explained in section 1.2 can be used:

```

,,07,,,1887,,,,,,,,,,,,,601000,,,,,12345678,,MR JOHN SMITH,,,PAYROLL 01,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

```

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013		T028	12345678	T043		T058		T073	
H002		T014		T029		T044		T059		T074	
H003		T015		T030	MR JOHN SMITH	T045		T060		T075	
T001	07	T016		T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003		T018		T033		T048		T063		T078	
T004		T019		T034	PAYROLL 01	T049		T064		T079	
T005	1887	T020		T035		T050		T065		T080	
T006		T021		T036		T051		T066		T081	
T007		T022	601000	T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010		T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Faster Payment bulk list – Credit

- T001 (record type) – The value '07' identifies the payment type as a 'bulk list credit'.
- T005 (beneficiary/payee identifier) – This should uniquely identify each payee on the bulk list and so a unique identifier should be used, such as staff payroll reference.
- T022 (account with bank identifier) – The value '601000' is the UK sterling sort code 60 10 00.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with bank identifier in field T022.
- T030 (beneficiary/payee name) – This is the name of the payee customer linked to the payee account number in field T028. Failure to enter a payee name may make it difficult to direct the payment to the correct account.
- T034 (beneficiary/payee reference) – Not a mandatory field. This is the individual reference that will be advised to the payee customer and should be meaningful e.g., payroll reference. Please ensure you add a payee reference (e.g., invoice number, customer number) to 4365rcomply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment. If left blank, then the payee reference inserted in the debit entry will be used (if present), otherwise we will insert the debit account name by default.

4.21 Faster Payment bulk payment (from an existing saved bulk list in Bankline) – Debit

This example shows how to format an import record for a Faster Payment bulk list payment with a single payee. Please note that all the file lengths explained in section 1.2 can be used:

```

,,06,,SALARY MTH END 01,,,,,,,,60100087654321,,,,,,,,16012025,,,,,,,,,,,,,PAYROLL,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

```

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013		T028		T043		T058		T073	
H002		T014		T029		T044		T059		T074	
H003		T015		T030		T045		T060		T075	
T001	06	T016	16012025	T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003	SALARY MTH END 01	T018		T033		T048		T063		T078	
T004		T019		T034	PAYROLL	T049		T064		T079	
T005		T020		T035		T050		T065		T080

T007		T022		T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010	60100087654321	T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Faster Payment bulk payment – Debit

- T001 (record type) – The value '06' in field T001 identifies the payment type as a 'bulk list payment debit'.
- T003 (template reference) – The value 'SALARY MTH END 01' identifies the bulk list from which the Faster Payment bulk payment will be made from.
- T008 (priority) – This field is used to differentiate Faster Payment bulk payments from bulk transfers. In this example, the field has been left blank. When left blank, this value will always default to 'N' for Faster Payments.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60 10 00 and account number 87654321. No dashes or spaces are required when entering the sort code, or between the sort code and the account number. The debit account must be a valid account as registered in Bankline.
- T016 (date payment to arrive/credit date) – The value '16012025' equates to 16 January 2025.
- T034 (beneficiary/payee reference) – This is the reference that will be advised to the payee customer and should be meaningful e.g., a payroll reference. Note that if an individual payee is given their own reference (as specified on the Faster Payment bulk payment credit) then that will override any reference supplied here. Please make sure you add a payee reference (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment. If no payee reference is entered then we will insert the debit account name by default.

4.22 Faster Payment bulk payment – Credit

When importing a bulk payment debit record, one or more bulk payment credit records must be present in the same file. Please note that all the file lengths explained in section 1.2 can be used:

,,,07,,,1887,,,,,,GBP,1566.23,,,,,,601000,,,,,12345678,,MR JOHN SMITH,,,PAYROLL 01,,,

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013	GBP	T028	12345678	T043		T058		T073	
H002		T014	1566.23	T029		T044		T059		T074	
H003		T015		T030	MR JOHN SMITH	T045		T060		T075	
T001	07	T016		T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003		T018		T033		T048		T063		T078	
T004		T019		T034	PAYROLL 01	T049		T064		T079	
T005	1887	T020		T035		T050		T065		T080	
T006		T021		T036		T051		T066		T081	
T007		T022	601000	T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010		T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Faster Paymnt bulk payment – credit

- T001 (record type) – The value '07' identifies the payment type as a 'bulk list payment credit'.
- T005 (beneficiary/payee identifier) – This should uniquely identify each payee on the bulk list and so a unique identifier should be used such as staff payroll reference.
- T013 (payment currency) – This will always be 'GBP' for a Faster Payment bulk payment.
- T014 (payment Amount) – No blank spaces before the numbers are required when entering the payment amount and the decimal point is necessary only where the amount requires it. The payment amount is in the currency in field T013.
- T022 (account with bank identifier) – The value '601000' is the UK sterling sort code 60 10 00.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with Bank identifier in field T022.
- T030 (beneficiary/payee name) – This is the name of the payee customer linked to the payee account number quoted in field T028. Failure to enter a payee name may make it difficult to direct the payment to the correct account.
- T034 (beneficiary/payee reference) – Not a mandatory field. This is the individual reference that will be advised to the payee customer (if the Faster Payment bulk list payment debit is not used) and should be meaningful to the payee, e.g., payroll reference. Please ensure you add a payee reference (e.g., invoice number, customer number) to comply with industry best practice. Failure to do so may make it difficult for the payee to identify who is sending the payment. If left blank, then the payee reference inserted in the debit entry will be used (if present), otherwise we will insert the debit account name by default.

4.23 Transfer bulk list (bulk list only, no payments) – debit

This example shows how to format an import record to create a Bankline transfer bulk list with a single credit account:

,,,06,T,LUMP SUM DISTRIB 1,N,,,U,,60100087654321,,,,,,,,,,,,,,,,,,,,,NARRATIVE 1,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

This is broken down below to illustrate how each field tag on the import record above has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013		T028		T043		T058		T073	
H002		T014		T029		T044		T059		T074	
H003		T015		T030		T045		T060		T075	
T001	06	T016		T031		T046		T061		T076	
T002	T	T017		T032		T047		T062		T077	
T003	LUMP SUM DISTRIB 1	T018		T033		T048		T063		T078	
T004	N	T019		T034	NARRATIVE 1	T049		T064		T079	
T005		T020		T035		T050		T065		T080	
T006		T021		T036		T051		T066		T081	
T007		T022		T037		T052		T067		T082	
T008	U	T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010	60100087654321	T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Transfer bulk list – Debit

- T001 (record type) and T002 (template indicator) – The value '06' in field T001 identifies the payment type as a 'bulk list debit', and the value 'T' in field T002 indicates that the import is for a 'bulk list' (not a payment from a bulk list).
- T003 (template reference) – The value 'LUMP SUM DISTRIB 1' is how the transfer bulk list will be known in Bankline.
- T004 (confidential indicator) – The value 'N' identifies this bulk list as 'not confidential'.
- T008 (priority) – The value 'U' is used as a marker to identify the bulk list as a transfer bulk list. If the field was blank, the default value would be 'N', and the bulk list could only be used for Faster Payment bulk payments.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60 10 00 and account number 87654321. No dashes or spaces are required when entering the sort code, or between the sort code and account number. The debit account must be a valid account registered in Bankline.
- T034 (beneficiary/payee reference) – The value 'Narrative 1' is the narrative that will be marked against each credit account included within the bulk transfer. Note that if an individual credit account is marked with a different narrative (as specified on the transfer bulk list credit), this will override any narrative supplied here for that individual credit account. If left blank, the narrative will default to the 'debit account name'.

4.25 Bulk transfer – debit

This example shows how to format an import record for a bulk transfer with a single credit account:

[illegible]

This can be broken down to illustrate how each field tag on the import record has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value
H001		T013		T028		T043		T058		T073	
H002		T014		T029		T044		T059		T074	
H003		T015	16012025	T030		T045		T060		T075	
T001	06	T016		T031		T046		T061		T076	
T002		T017		T032		T047		T062		T077	
T003	LUMP SUM DISTRIB 1	T018		T033		T048		T063		T078	
T004		T019		T034		T049		T064		T079	
T005		T020		T035		T050		T065		T080	
T006		T021		T036		T051		T066		T081	
T007		T022		T037		T052		T067		T082	
T008		T023		T038		T053		T068			
T009		T024		T039		T054		T069			
T010	60100087654321	T025		T040		T055		T070			
T011		T026		T041		T056		T071			
T012		T027		T042		T057		T072			

Bulk transfer – Debit

- T001 (record type) – The value '06' in field T001 identifies the payment type as a 'bulk list payment debit'.
- T003 (template reference) – The value 'LUMP SUM DISTRIB 1' identifies the bulk list from which the bulk transfer will be made from.
- T010 (debit account identifier) – The value '60100087654321' is a UK sterling account with sort code 60 10 00 and account number 87654321. No dashes or spaces are required when entering the sort code, or between the sort code and account number. The debit account must be a valid account as registered to that customer in Bankline.
- T015 (execution date) – The value '16012025' equates to 16 January 2025.
- T034 (beneficiary/payee reference) – This field should not be populated for a debit bulk transfer.

4.26 Bulk transfer – Credit

When importing a bulk transfer debit, one or more consecutive bulk transfer credits must be imported at the same time. This is because each bulk transfer must have at least one payee.

```

,,07,,,,,,,,,GBP,1566.23,,,,,,,,601000,,,,,12345678,,,,,NARRATIVE 3,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,

```

This can be broken down to illustrate how each field tag on the import record has been populated.

Field	Value	Field	Value	Field	Value	Field	Value	Field	Value	Field	Value

Bulk transfer – Credit

- T001 (record type) – '07' identifies the payment type as a 'bulk list payment credit'.
- T013 (payment currency) – This will always be 'GBP' for a bulk transfers.
- T014 (payment amount) – No blank spaces before the numbers are required when entering the payment amount and the decimal point is necessary only where the amount requires it. The payment amount is in the currency quoted in field T013.
- T022 (account with bank identifier) – The value '601000' is the UK sterling sort code 60 10 00.
- T028 (beneficiary/payee account number) – This is the payee account number held at the account with bank identifier quoted in field T022.
- T034 (beneficiary/payee reference) – Not a mandatory field. This is the individual 'narrative' that will be marked against the credit account (if the transfer bulk list credit is not used). In this case, a value of 'Narrative 3' will be used instead of 'Narrative 2' (previously specified on the transfer bulk list credit).

5 Glossary of terms

We've used these terms and abbreviations throughout this document.

Term/Abbreviation	Definition
BIC	Bank Identification Code This is the structured code used by SWIFT to uniquely identify a financial institution, its country of operation, and its branches.
Bulk transfer	Bulk transfer A single debit, multiple credit transfer made from a bulk list.
Domestic	Domestic payments are those that are made to a payee who is based within the UK (or the Isle of Man, Jersey, Guernsey or Gibraltar).
Faster Payment	A near real time sterling transfer between banks. A Faster Payment may be classed as an immediate payment, a future dated payment or standing order.
Transfer	Transfer A payment made by a customer from one of their own accounts to another of their accounts held with the same bank.
Transfer bulk list	Transfer bulk list A bulk list that is used to make single debit, multiple credit transfers.
NCC	National Clearing Code The standard identification code for a country, used to uniquely identify a bank, branch or other financial institution (e.g., a sort code in the UK or a Fedwire Number in the United States of America).
NWG	The NatWest Group
SEPA	Single euro payment area. This comprises the member countries of the EU, plus Iceland, Liechtenstein, Monaco, Norway, and Switzerland. From 1 May 2016 the UK Crown Dependencies (Jersey, Guernsey and the Isle of Man) were also added. An international SEPA routing payment is a payment to one of the above countries that is sent in euro as standard priority, with Charges Code (T012) left blank or set to 'SHA' and does not make use of either an intermediary BIC (T043) or SWIFT code words (T048 to T067).
Sort code	The UK's national clearing code used to uniquely label a bank, branch or other financial institution. The sort code is registered in the industry database to show whether it is valid for use on Faster Payments or CHAPS payments.

SWIFT	Society for Worldwide Interbank Financial Telecommunication SWIFT operate and regulate the secure network used to transmit many of the inter-bank electronic payment messages that will originate from Bankline.
LEI	A Legal Entity Identifier is a global standard identification code for businesses. They provide clear identification of parties in a transaction and better risk assessment for business transactions. They are exactly 20 characters long, consisting of a mix of eighteen letters or numbers, finishing with two numbers.
Purpose code	Purpose codes are four letter codes which are carried across the payment chain making it clear what the payment is for. The code will be visible to the banks processing the payment and to your payee.
Ultimate debtor	Ultimate party that owes an amount of money to the (ultimate) creditor.
Ultimate creditor	Ultimate party to which an amount of money is due.
UETR	Universally unique identifier to provide an end-to-end reference of a payment transaction.
IBAN	International Bank Account Number (IBAN) – identifier used internationally by financial institutions to uniquely identify the account of a customer. Further specifications of the format and content of the IBAN can be found in the standard ISO 13616 "Banking and related financial services – International Bank Account Number (IBAN)" version 1997-10-01, or later revisions.
CHAPS	CHAPS is used to settle high-value and time-critical payments in the UK, such as property transactions or foreign exchange transactions.
