

BUSINESS

ISO 20022 is coming
in November 2022

Over the next four years, we'll be working to help you and your business transition in readiness for ISO 20022 regulatory changes.

As a business ourselves, we'll be changing our systems to align with the new regulation and we'll be there to support you every step of the way as well.

Introduction

2022 XML (eXtended Mark-up Language) is an established global standard for payments messaging. Most payments to and from the European Union are already based on this standard.

Over time, ISO 2022 XML will be used by all payment service providers (PSPs) in the UK for all payment products starting with CHAPS and international (currency) payments.

It will deliver a common language and model for exchanging payments data across the globe, provide richer and higher quality information than current messaging standards and better enable future innovation and development in the UK payments ecosystem.

Depending on the payment types and payments data services you use, it also means there may be a need to make changes to the way you send/receive and process domestic and international payments, which in turn will bring many future benefits.

ISO 2022, first published by International Organization of Standardization (ISO) in 2004, has already been adopted in 70 countries – including China, India and Japan – to replace domestic or legacy formats.

Clearing House Automated Payment System (CHAPS) and TARGET2 Euro payment (T2) are on track to migrate sterling and euro payments to ISO 2022 XML over time. SWIFT will also migrate cross-border payments requiring a coexistence of current and new ISO 2022 XML message standards until 2025.

Within five years, it's predicted that around 80% of high-value global payments by volume and 90% by value will have migrated to ISO 2022.

Benefits of ISO 2022 XML

The main benefit of adopting ISO 2022 XML is a far better payments experience for all users, reducing multiple payment scheme and bank in-house formats to a single industry-wide standard.

The migration to ISO 2022 XML will also enable improved user functionality, harmonising different business and operational rules to one single “rulebook” for all participants in the payment chain (although small differences may exist between the schemes), improvements in how customers initiate and collect payments and simpler bank processing.

The richness of data carried in ISO 2022 XML payment instructions will also foster new innovative services, which among other benefits will enable progress towards further digitalisation of corporate treasury.

Examples of corporate benefits after migration to ISO 2022 XML

XML is used globally
Once created – say for SEPA – it can be tweaked and amended to handle payments globally across other banks/countries. Defacto the standard message type for instant payment around the globe. Used in securities and trade transactions as well.

Supported by most banks in 70 countries
Corporate will no longer need to use bank/scheme proprietary formats, eliminating a technology barrier to choose better payment providers.

XML simplifies development and support
Smaller team support payment IT/operations, development can be outsourced, major ERP vendors offer XML “out of the box”.

Standard can be used for most payment types
Including most domestic supplier and ACH-type payments. Cross-border, wire/urgent currency agnostic. Payroll payments. A wide range of standardised purpose codes can be used (e.g. SALA). Natively supports POBO.

Fewer maintenance and future development costs
After initial investment – if never done before – single interface, less IT, operational and support costs, access to alternative channels (Swift FIN vs Swift FileAct).

Enable payment processing efficiencies
Standardise information to make payments, a way to internally process them, ERP file generation, delivery of payment instruction to the bank channels. Interoperability allows rerouting.

Access to multiple delivery channels
Increase the delivery options to include file upload, FTP, H2H, Swift FileAct, EBICS and Open Banking to better fit the need of the corporate organisation and bank partnership strategy.

Exchange enriched data/remittance information
Extended data to identify the parties in the transaction. Up to 140 characters of unstructured or structured information to send or to receive to/from suppliers around the globe leading to increase in (automated) reconciliation efficiency. Improved decision-making based on better data.

Increased ability to control payment processing and reports generation
Enables payment method indicators like CHK or TRF, URGP. Batch booking tags allow to ask for a consolidated single entry in the statement.

CGI Group foster further simplification
The Common Global Implementation Group guidelines foster further standardisation along country specific modifications, supported by all major banks around the globe.

Royal Bank and ISO 20022 – How will it affect you?

Royal Bank will start supporting the new ISO 20022 XML messaging for UK formats in the inter-banking space from the published industry migration dates.

We will, however, gradually introduce changes to our customer experience depending on the payment type and channel used. While we work to minimise disruptions to our customers' operations, a variety of changes are expected to occur, especially for those customers who have a direct link to our payments infrastructure. Other customers may notice fewer changes and less impact, and be required to make fewer changes to their day-to-day operations.

Our ISO 20022 migration strategy is being determined by the approach taken by the scheme operators and regulators. We're currently finalising our core payment systems to be able to support all the ISO 20022 requirements and are finalising the timings of the transition states.

Most banks have already started their journey to migrate the UK payment offering to ISO 20022, something that will not happen overnight but will take years to fully implement.

Keeping up to date with the latest developments and understanding the key points can be difficult and for this reason we'll be producing a series of ISO 20022-themed brochures to aid understanding of what this means for our customers.

Latest developments and scheme updates

In 2020, SWIFT and the European Central Bank (ECB) decided to delay its implementation of ISO 20022 XML for currency and euro payments respectively to November 2022.

The Bank of England has also changed its approach to CHAPS, with CHAPS set to go live – limited to the inter-banking space – in June 2022, followed by full XML enhanced message adoption in February 2023 and additional compulsory requirements by 2024. All coexistence of ‘old’ and ‘new’ payment messaging formats are currently planned to end by 2025.

Helping you prepare

We're at an early stage of the migration to ISO 2022 XML and not yet able to tell you exactly what changes you'll see and/or need to make to your payment operations. We'll share more information in the coming months on specific changes you may need to make before the CHAPS, Euro and SWIFT transitions to ISO 2022 XML commence in mid-2022.

When the detail of changes is clear, we'll work with you to support potential internal system changes, testing and operational readiness for ISO 2022 XML by the transition dates.

It's important that if you don't currently make or receive payments that are already supported by ISO 2022 XML (eg SEPA credit transfers or Direct Debits), you start familiarising yourself with the changes ISO 2022 XML will bring to CHAPS and international transfers.

Contact us

As you develop your own ISO 2022 plans, we'll continue to keep you informed with our developments along with any industry communications through our Communications Programme 2021. If you have any further questions, please contact us via email at ISOSupport@rbs.co.uk

If your organisation already uses ISO 2022 XML messages, you may want to start investigating any changes you might need to make to your initiation or collection of CHAPS, Euro and SWIFT payments.

We strongly recommend that you start discussions about the potential impacts brought by ISO 2022 XML and consequent changes you might need to make with third-party suppliers and technology partners who support your organisation's payments operations and systems.

In the appendix, you'll find sources of information for each payment scheme that will provide insight at a general and more technical level.

“It's a matter of compliance but we are also aware of the opportunities. We are participating in the industry debate at all levels. And we're keen to engage to understand the needs and requirements of our customers.”

**Giangiulio Bagnai, Associate Director
Regulatory Programmes.**

There are some useful resources available in the public domain that provide overviews of ISO 2022 XML and the different schemas.

There are also some links to training modules on ISO 2022 XML, which can all be found below. We encourage you to use these to build your organisation's knowledge further and to prepare for migration to ISO 2022 XML.

Access to SWIFT MyStandards

All schemas are now available via SWIFT MyStandards. The owner of the relevant industry format will need to grant access to the specific SWIFT My Standards Community Group.

Once you have been given access to the Royal Bank MyStandards Community Group, you can view the information for ISO 2022 XML under the option “Standards Releases”.

You must be registered for an account on [swift.com](https://www.swift.com) and full instructions on how to register can be found via [this link](#).

Explore MyStandards: no extra steps are required. Access can be via [this link](#) after registration has been completed.
